

3 WAY BALL VALVE Type 23(Manual Type)

Features

- Enables switching between two flow paths and complete closing.
(Only one valve is necessary in a line conventionally requiring two ball valves.)
- The shape of valve element (ball) is selectable from three kinds, allowing for switching of flow direction according to the application.

Basic specifications

-Valve Type	:	3 Way Ball Valve Type 23
- Size	:	15 mm – 100 mm (1/2 inch – 4 inch)
- Body Material	:	U-PVC (Conforming to ASTM D1784 Cell Classification 12454A) C-PVC (Conforming to ASTM D1784 Cell Classification 23567-A) PP (Conforming to ASTM D4101 Cell Classification PP0110B67272) PVDF (Conforming to ASTM D3222 Cell Classification Type II)
- Seal Material	/ O-ring	: EPDM, FKM etc.
- Connection	/ Flanged	: JIS B2220 5K, JIS B2220 10K, DIN/EN1092-1 PN10, ANSI B16.5 CLASS150
	Socket	: JIS, DIN, ASTM D2466 SCH40/SCH80
	Spigot	: DIN
	Threaded	: Rc, Rp, NPT
- Port	/ Double L Port, L Port	: 15mm – 100mm (1/2 inch – 4 inch)
	Cross Port	: 15mm – 50mm (1/2 inch – 2 inch)

Body Material	FLUID TEMPERATURE °C {°F}	Maximum working pressure (Normal temperature) MPa {psi}	Connection method			
			Flanged	Socket	Spigot	Threaded
U-PVC	0 ~ 50 { 30~122 }	1.0 { 150 }	○	○	○	○
C-PVC	0 ~ 90 { 30~195 }	1.0 { 150 }	○	○	-	○
PP	-20 ~ 80 { -5~175 }	1.0 { 150 }	○	○	○	○
PVDF	-40 ~ 100 { -40~210 }	1.0 { 150 }	○	○	○	○

Note:

- (1) The ball-type valves have dead spaces for structural reasons. Note that volatile liquids, such as hydrogen peroxide (H₂O₂) and sodium hypochlorite (NaClO), vaporize in those dead spaces, which may cause abnormal pressure increase in the valve. (When the internal pressure abnormally increases due to vaporization, the gas will be compressive fluid. If the valve breaks in this state, it will be very dangerous, causing explosion and scattering of fragments.)
- (2) The maximum working pressure is the value including the water hammer pressure. Be careful that the maximum working pressure is not exceeded during use.

*

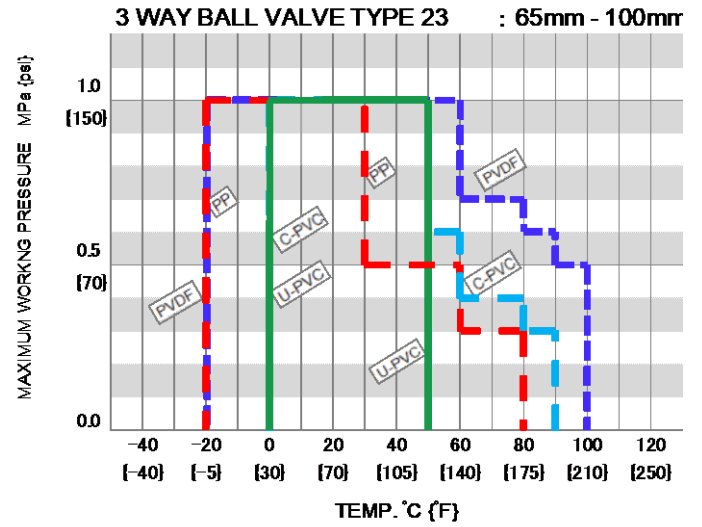

Concerning the allowable pressure for each temperature and material, see the technical documents at the next page of this sheet.

FLOW DIRECTION DIAGRAM

The direction of flow is selectable according to the application.

Three types of valve element (BALL) are available: "L PORT", "DOUBLE L PORT" and "CROSS PORT".

The direction of flow can be switched according to the application.

	COMPATIBLE ACTUATION METHOD	ROTATION ANGLE					BALL SHAPE
		0°	45°	90°	135°	180°	
L PORT (90° or 180°)	MANUAL — ○ ELECTRIC — △						
DOUBLE L PORT (90°)	MANUAL — △ PNEUMATIC — ○ ELECTRIC — ○						
CROSS PORT (90° or 180°) *For 15 - 50 mm only.	MANUAL — △ PNEUMATIC — △ ELECTRIC — △						

○ indicates standard products. □ indicates optional products.

* Our products are vertical type. The double L port and cross port cannot completely stop the flow in three directions.

* For automatic valves, the direction of flow is determined as follows according to the operation system:

Air to open: Right opens during air supply.

Air to close: Left opens during air supply.

Double acting: Right opens during air supply on (O) side.

Left opens during air supply on (S) side.

* Also for the solenoid valve, the right side opens when energized and the left side opens when de-energized.
